Fiber Optical cable with 12 Multimode OM3 fibers, Loose tubes, double PE jacket, central strength member of FRP, corrugated steel tape, dry water block cable core and Ripcord

LPOC03120124TP_SS_ENB01W

Features

- Loose tube gel-filled construction for superior fiber protection.
- UV- and moisture-resistant design.
- Rodent-resistant construction.
- GEL Water Block cable core for protection against moisture filling cavity between FRP strength member and inner PE sheath. (Optional).
- One or Two Water block tapes are applied contra helically between corrugated steel tape and inner PE sheath.
- Buffer tubes are stranded around the dielectric central strength member using the reverse oscillation or "S-Z", stranding process.
- Two polyester yarn binders are applied contra helically with sufficient tension to secure the buffer tubes layer to the dielectric central strength member without crushing the buffer tubes. These binders are non-hygroscopic, non wicking and dielectric with low shrinkage.

Applications

- Usable in Direct burial or Aerial.
- Long-haul communication systems.
- Junction communication systems.
- Subscriber network systems.
- Local area network systems.

Fiber Optical cable with 12 Multimode OM3 fibers, Loose tubes, double PE jacket, central strength member of FRP, corrugated steel tape, dry water block cable core and Ripcord

The **LP-OC03120124TP** is family of Fiber optic cables that the industry calls an Outside Plant Cable, made sturdy enough for laying directly buried or in underground conduits, ducts or in aerial/lashed deployment.

Loose tube style, optical fiber cable with non-metallic central strength member of FRP and moisture barrier inner sheathed. Cable protected by a corrugated steel armoring and black PE over sheath for protection against mechanical damage and termite or rodent attack, suitable for direct buried or aerial application. Tubes contain optical single-mode or multimode fibers color coded as per color coding scheme
