LanPro's SM Patch Cords offers the interface between distribution cables and active optical equipment. This is a Vital link!

Patch cords can be offered in simplex and duplex cable types in SM technology.

From 1/2m to several hundred meters under request.

Bend Insensitive Fiber Cable is less attenuation when bend or twisted compared with traditional fiber cables and this will make the installation and maintenance of the fiber optic cables more efficient. It also can save more space for your high density cabling.

LanPro's patch cords are designed specially for building back bone and passive optical LAN installations.
