- Competitively priced.
- To ensure long life all our CAT6 series are punch down style.
- Also available HS and FS (see text above).
- Material: ABS UL94V-0.

Jacks Cat 6

The LanPro CAT 6 (Reliable 6) system, is comprised of Reliable CAT 6 data cable, Patch Cords, Patch Panels and modular jacks. Lanpro has designed them specifically for high speed, bandwidth in excess of 300Mhz+, and easy installation. 568A/B compatible.

Our modular jacks are designed to match perfectly our Reliable 6 compatible products. All CAT6 devices are very adaptable to customer changing requirements. Easy installation and maximum performance.

All of them allow for universal termination, either T568A or T568B. To ensure a reliable connection, all CAT6 jacks (couplers) are punchdown version, thus offering a higher level of performance. Also available in HS (half shielded) version and (FS) full shielded version. We do not recommend toolless version as field experience demonstrates that punch down styles are far more reliable.

Series 7000 comes standard with a strain relief cover that secures a perfect cable termination.

Notice: All our Couplers (Jacks) are also suitable for Cat3 system cabling and the RJ11 is completely compatible with it. However, if you need a specific CAT3 coupler, please look at to our specific CAT3 series of products.

A How to Order
