## Why should you choose LanPro's NEW X-Class keystone jack?

Our traditional jacks have been the industrial standard for the last 20 years. We have sold hundreds of thousands of them worldwide with a huge success. But products become obsolete due to technology evolution and cost reduction which result in a better performance/cost ratio.

We decided to completely re-design the 8000 Series Jacks from scratch and up, with a focus on our customers' complaints, recommendations, and imagination!

The new **X-Class Jack** is designed to be mechanically stronger. Our most innovative improvement is greater reinforcement surrounding the cable feeder. The jack itself is smaller in size and easier to use. It also includes a narrower RJ45 footprint but maintaining the standard Keystone jack compatibility for the standard fixation to a faceplate or patch panel.

Because the **X-Class Jacks** are robotically assembled, there is less human error in the manufacturing process and ensures consistency in product quality.

The new **X-Class Jack** is significantly smaller, which makes it ideal for even limited spaces. It is compatible with the new **iMC® LanPro's** interchangeable system. Moreover, being a more compact design, it fits other faceplates and advanced modules from other recognized brands where older products interfere mechanically between them due to their dimensions.

Additionally, with the carved logo and design, counterfeiting is more difficult.

The locking latch is more flexible and easier to press, but it's still reliable. It is 100% compatible with our equipment, faceplates and traditionally offered modules and with those of other brands, offering a remarkable advantage for new high density models.

Our competitors often deliver the jacks in bulk-packaging, this leaves the item vulnerable to damage due to friction between them, humidity, dust, pollen, and other nuisances, especially in humid and tropical climates. However, **Lanpro** have individually packed and sealed our jacks (tie wrap included) in order to keep them protected.

UL and UL© certified under number DUXR.E329018.

The new **X-Class® Jack** are here to stay. We offer an incomparable performance to price ratio, which will ensure durability for budget sensitive installations.

# X-Class

The new **X-Class Jack** is significantly more reduced in size, ideal for its use in limited spaces.

It is compatible with the new **IMC®** Interchangeable Modular Compatibility System of **LanPro**. Moreover, being more compact in size, it fits neatly in other faceplates, or advanced styles of other important brands, where older products won't fit when used in the presence of other components due to their dimensions.
