# Reelex II

## Two Decades of Evolution

For many decades, **LanPro** has designed, produced and sold low voltage wires of superior quality and affordable price. In different styles and formats, from traditional cable CAT3 (phone wire) to 10 GB CAT 6A. Our cable products have come a long way, however, the design of the box and the style of packaging remained without much change over the time.

In 2014, we decided to upgrade to the package known as Reelex II®, which is not simply a nice cardboard box, but a designed free-knot, free tangle dispensing system for smooth and quick use. The new LanPro ReelexII® can be appreciated when a technician has to work up on a ladder running cable or in an uncomfortable place unaided.

Reelex II® box is much more appealing and durable, it's square shape was designed to be conveniently stacked one above the other without causing any structural damage, and always be able to dispense the cable quickly and exact.

The Reelex II® system is currently available in the CAT 5 and CAT 6 cables, and soon will expand to other models.

We hope our distributors improve sales and technicians have a hassle free experience with this new product.

**LanPro** is always improving and extending our products and delivering greater value to our customers.

*All our cables are certified by recognized institutions such as UL, ETL, DELTA Europe among others. LanPro is an US registered brand.*

*We are always improving and extending our products and delivering greater value to our customers.*
